

TRY IT
ISOLAZ

For mild or severe pustular and comedonal acne, Isolaz is a miracle in a machine. The twenty-minute, painless procedure (your face is slightly warm afterwards but there is no redness or downtime) uses a suction cup to literally suck the sebum (oil) out of pores and a laser to combat rosacea and other discolorations. Unlike other treatments that require over ten sessions, with each session costing as much as rent, this treatment takes only four to five sessions and results can be seen the next day (\$375). Since your glowing skin is finally grease- and bacteria-free, you can finally ditch the antibiotics, overdrying topicals, and harsh peels. Dr. Doris Day, 135 E. 71st St., nr. Lexington Ave., Ste. 1A; 212-772-0740.
