ANTI-AGING BREAKTHROUGHS

"I want smaller pores."

Reduce pore size

Originally developed for hair removal, Isolaz, a groundbreaking painless treatment suitable for all skin types, employs both suction and laser therapy to thoroughly clean your pores, clearing them of dirt, oil and debris. Not only does Isolaz help to address pore size, it also fights mild to moderate acne. The 10-minute, no-downtime-required treatment uses a vacuum to first gently lift bacteria to the surface before a laser light—which doesn't cause light sensitivity and is safe to use during pregnancy—kills the bacteria and sloughs away dead skin cells and oil. Your skin may feel warm directly after the treatment, but you will see a visible difference in pore size (and severity of acne) after about four treatments. *Starting at about \$375 per treatment*
